Flag: Follow up

Karen,

My apologies; any further communication will include the parties mentioned.

Best regards,

Steve McGrath

Thanks for the email, Steve. As indicated last week, I am more than willing to meet with the proposed stakeholder group, and have Health Department staff attend as well, but I want EPA and DEQ involved. As also previously indicated, the Butte-Silver Bow Health Department is under contract with DEQ to measure and monitor air quality from our Greeley station (PM 2.5). We have no funding from any source, including DEQ, to measure and monitor for TSP and PM 10. I agree with you that before any local standard for TSP and PM 10 could be established (there are no similar standards at the state and federal level), more data would be required – we are not funded to go after that data.

In this reply to you, I am copying in Nikia Greene from the EPA and Daryl Reed from DEQ, as well as Doug Kuenzli from DEQ. It is important to have involvement from these agencies, not only from a monitoring and standard-establishment standpoint, but EPA and DEQ also have environmental jurisdiction over Montana Resources' operations. As the Greeley neighborhood coalition plans for a stakeholder meeting, please include these people in your replies – I appreciate it – thanks very much – Karen Sullivan

Karen,

Again, thank you for your positive response to our efforts. I think a preliminary meeting of our Task Force with you and Mr. Rolich and any others you deem appropriate would help to outline a path forward. In my mind, one of the biggest initial hurdles is establishing an air monitoring program that collects data of the quality produced by Dr. Hailer for the metal content of the Total Suspended Particulate and the PM10 fraction. Relying on anecdotal data such as the residents were forced to collect will not be of any value going forward. Before we can talk about research on health effects or establishing a local standard for metal loading in the dust, we need data. Also, we won't be able to definitively answer whether MR is making progress in their fugitive dust abatement unless we have the data.

I assume that your schedule may be full with the upcoming holidays, but when you are available, we would welcome a smaller preliminary meeting prior to a larger convocation of stakeholders.

Best regards and Happy Thanksgiving,

Steve McGrath, Chair

Subject: Re: Meeting Request

Karen,

Thank you for your prompt response and willingness to move forward on this issue. Initially, we need more data on the metal content of particulate received by the neighborhood, and we welcome any opportunity to begin a monitoring program that addresses that need. However, we are encouraged by the improvement in the air quality as defined by the PM2.5 standard and appreciate the efforts of the BSB Health Department in that regard. We agree that participation in a meeting by all stakeholders would be the optimal scenario.

Again, thank you for your willingness to confront the dust problem and to discuss further research on possible health effects that may arise from chronic exposure to metals in the dust.

Hi Steve: Thank you for this email. I am copying in here John Rolich, who is the director of our Environmental Health Division, and other Butte-Silver Bow stakeholders.

John Rolich has forwarded your email to the Montana Department of Environmental Quality, as I would want DEQ – along with John and me and possibly other county stakeholders – to attend the meeting you have requested. As you likely know, the Health Department does not currently measure from our Greeley Air Station for PM10 or Total Suspended Particles. Our station does measure for PM2.5, under contract with DEQ. I want DEQ's involvement in the meeting you requested because establishment of a new standard related to PM10 or TSP may involve state statute or a revision of such statute. And we of course would desire a funding source in the pursuit of more data related to PM10 and TSP. Additionally, DEQ has jurisdiction over Montana Resources, Inc., in regard to environmental standards.

The Butte-Silver Bow Board of Health recently authorized the expenditure of funds from the Health Initiatives component of the Redevelopment Trust to conduct a follow-up chemical mass balance study (PM2.5) – this will be conducted next winter by Tony Ward, PhD, from the University of Montana, who conducted a similar study five years ago. We asked for this study to determine whether our Woodstove Change-out Program in the Greeley neighborhood had positive effect. I'm attaching a synopsis of the Ward study (and an accompanying airshed study by Kumar Ganesan, PhD, of Montana Tech). I will assume that our conducting a new chemical mass balance study focused on PM2.5 will bring you little comfort, as you are requesting study of PM10 and TSP as related to the metals cited in Dr. Hailer's study, and the establishment of local related standards. But I did want to let you know that a follow-up study by Ward will be occurring.

Again, my request of DEQ will be to be part of this meeting – I will let you know, Steve, when and what we hear back from DEQ. I look forward to the discussion – Karen Sullivan

Subject: Meeting Request

Attn: Karen Sullivan, Director B-SB Health Department

On behalf of the Greeley Neighborhood Community Development Corporation Inc. - Habitability - Mining Impact Task Force I would like to request a conference with you, Dr. Katie Hailer, David Hutchins, and the members of the GNCDC Inc. - H - MITF to discuss the creation of a program to collect appropriate data with the ultimate goal of setting a local PM 10 and TSP Air Quality Standard on the basis of metal exposure for at least the five major toxic metals detected in Dr. Hailer's study, and the possibility of the B-SB Health Department commissioning an appropriate study/investigation to determine such an obtainable local PM 10 and TSP Metals Air Quality Standard.

Respectfully requested,

Steven McGrath, Chair
Greeley Neighborhood Community Development Corporation Inc. -
